

**Voluntary Remediation Program  
Department of Environmental Management**

**Project Summary**

<b>Site Name:</b>	Scott Industrial Systems
<b>Applicant Name:</b>	Scott Industrial Systems
<b>Site Location:</b>	2655 Tobey Drive; Indianapolis, Marion Co.
<b>VRP Site Number:</b>	6040901
<b>Project Manager:</b>	Brandy Hawley
<b>Date Application Received:</b>	September 10, 2004
<b>Date Project Completed:</b>	April 7, 2010
<b>Contaminant(s):</b>	SVOCs (soil); PAHs (groundwater)
<b>Media Addressed:</b>	Soils and Groundwater
<b>Cleanup Objectives Achieved:</b>	RISC Industrial Default Closure Levels
<b>Deed/Land-Use Restrictions:</b>	ERC restricts residential usage of property

**Project Summary:** The site formerly manufactured and distributed hydraulic and pneumatic pump systems. During that time, Scott Industrial also leased a portion of the site for storage. During a Phase I Environmental Site Assessment, completed in 2006, stained soil was observed near the former location of a hydraulic test bench, located near the building footer. To address the stained soils, a total of 3.62 tons of soil was excavated from the area. It was determined that soil contamination associated with the hydraulic oil release was limited to the immediate vicinity of the building footer during excavation activities and subsequent investigations. For groundwater, the final confirmatory sampling event showed results were less than detection limits for all PAHs, therefore, no groundwater restrictions were placed in the ERC. The site seeks coverage for semi-volatile organic compounds (SVOCs) in soil and polynuclear aromatic hydrocarbons (PAHs) in groundwater. Currently, the property is operated as a Laundry and Tan Connection and is also used to store laundry and tanning bed supplies.
